

## AlyTech will be presenting three products at Arab Lab 2010

### ✓ **GasMix™: gas and LPG dilutions and standard preparations by AlyTech**

AlyTech has developed GasMix™, a system which can prepare both gas and LPG standards.

Single and multipoint calibrations can be performed using Mass Flow Controllers (MFC), saving operator time and money for all demanding users. Gas tank storage is drastically reduced.

Its dedicated user-friendly software allows programming sequences of gas standards, with as many concentrations as needed.

The latest version of GasMix will be introduced during the show, allowing more samples to be handled, and new features.

### ✓ **ACL Instruments**

ACL supplies innovative solutions for the testing of oxidative stability of organic compounds and product formulations. Our state-of-the-art sensitive analysis instrumentations and the custom services are full of possibilities for industrial requirements, such as stability prediction, QC, R&D, safety. Fields of application are technical goods (polymers, adhesives, fuels and biofuels, explosives, specialty chemicals) and life science (food, pharmaceuticals, flavours, medical diagnostics).

### ✓ **DeIMar Scientific**

Small, light-weight and easy to use, the YellowJacket Portable H<sub>2</sub>S Analyzer uses our Gen3 CPU and software, the most advanced, digitally-enhanced lead acetate tape technology available for the measurement of Hydrogen Sulfide gas concentrations in pressurized gaseous streams. Engineered on feedback provided by end-users, the YellowJacket is intended for temporary on-line/process measurement of natural gas pipelines; primarily when multiple measurements are required within the same day.”
