## PRESS RELEASE

June 25, 2009

### Announcing Daigger's Avitrolab Pipette Tips at new reduced prices!

We are pleased to announce A. Daigger and Company's Avitrolab line of pipette tips – offering you high quality tips at affordable prices. Due to overwhelming demand, we have reduced our prices on the full line of Avitrolab Pipette Tips!

Avitrolab Pipette Tips offer you the full range of pipette tips for all of your liquid handling needs – standard tips in bulk, racked, and racked sterile; sterile racked filter tips, gel tips, wide bore, and large volume tips.

These polypropylene tips are available in a wide range of volumes and are manufactured for reliability and precision.

Sterile tips are electron beam irradiated to eliminate sample contamination, and all tips are certified RNase-, DNase-, RNA/DNA- and pyrogen-free.

Some tips are also available with low-retention plastic, minimizing sample holdup and ensuring highly accurate pipetting within 0.1% of the indicated volume.

Avitrolab Pipette Tips have a universal fit, and are suitable for most standard pipettes on the market.
