## New Disc Dispenser from Mast

The new Mast DiscMaster2™ disc dispenser combines ergonomic design with practicality for routine, reliable dispensing of both Mast antimicrobial susceptibility and identification discs in cartridges.

The DiscMaster2™ delivers up to 6 discs per application, and can accommodate a range of agar depths due to its easily adjustable skirt, ensuring robust and reproducible dispensing in line with the various standard testing methodologies including BSAC, DIN, AFSAPPS etc.

The DiscMaster2 is supplied complete with a portable storage canister, containing integrated gel desiccant capsules which enables users to store the unit complete with cartridges, whilst maintaining confidence in the integrity of the discs.

In addition, the new “lock-off” functionality indicates when the final disc has been dispensed from a cartridge, permitting users to replenish their supply.

Laboratories interested in viewing the DiscMaster2 dispenser, should contact the local Mast representative or distributor, or contact [sales@mastgrp.com](mailto:sales@mastgrp.com) to request a demonstration.
