

A NEW REVOLUTION ON THE HORIZON

Woodley Equipment Company Ltd is the official European distributor for Clinispin **horizon** centrifuges – the first innovative low-cost horizontal centrifuge range, which now includes seven CE Marked models. New additions to the range include the 842COMBI and the 853RAPIDE:

Clinispin horizon 842COMBI

One centrifuge does it all! The Clinispin **horizon** 842COMBI is a small, compact and robust centrifuge, which accommodates 16 tube positions all on one rotor. The exclusive Drucker rotor, which spins 2ml serum, haematocrit or QBC tubes, allows for quick and easy sample loading and complete separation.

Clinispin horizon 853RAPIDE

The Clinispin **horizon** 853RAPIDE is the newest centrifuge to be added to the **horizon** range. Specifically designed for Emergency Laboratories processing urgent Biochemistry/ Cardiac samples, it separates 12 gel tubes in 3 minutes. The RAPIDE enables samples to be centrifuged and analysed as they arrive in the laboratory and increases turnaround time. The horizontal rotor also produces horizontal separation for a better sample quality.

Why horizontal separation?

Horizontal separation maximises the centrifugal force, therefore reducing spin times, and a horizontal rotor produces a tighter horizontal separation line. The tighter gel line prevents re-mixing and therefore contamination and haemolysis, and is also less likely to become disturbed during shipping ensuring your samples arrive at their destination in perfect condition.

Horizontal separation is preferred and insisted on by most laboratories and the horizontal separation line is more convenient and compatible with most laboratory analysers.

Woodley Equipment Company Ltd is the official European distributor for Clinispin **horizon** centrifuges – the first innovative low-cost horizontal centrifuge range.

Woodley Equipment Company Ltd are exhibiting at ArabLab 2010.
